Delime switch location

Effective October 1, 2026, the delime switch location will be changed from inside the control box to the back of the control box on upright machines, including AF-3DS, AF-ES, LW, AFB, 5AGS and 5AGES. This change is intended to provide easier access to the delime switch for technicians and service personnel. A delime switch decal will be placed next to the switch to clearly identify its location.

New location for the delime switch. Back of the control box.

Old location of the delime switch. Inside of the control box.
